

# Professional Training for Successful Organic Turf Care

for Private Landscapers & School and Town Turf Managers

***Consumer demand for organics is increasing.  
New laws are prohibiting pesticides on playing fields.  
Are you ready for the future of the green industry?***

Organic turf care is the fastest growing segment of the green industry. Lawns and fields that are managed organically feel great, have greater resilience and drought resistance, and often cost less to maintain than turf managed with chemical pesticides.

Successful organic turf care requires a basic understanding of soil biology, proper nutrition, advanced horticultural techniques and other management skills. It's not rocket science, but you'll need professional training by experts if you expect to get the most out of your organic program.

Nationally-recognized organic turf consultant **Chip Osborne** has been managing organic turf for more than fifteen years, and has trained thousands of successful organic landscapers all across the country. His hands-on, real world experience gives him a unique perspective, and landscapers and turf managers that have taken this course are unanimous in their acclaim.

**ONE DAY COURSE**  
9am to 4 pm
